

Peakless and four comparison sites

Peakless, bonkers.ie, kilowatt.ie, switcher.ie and EnergyPal. Fifteen homes, each typed in and uploaded as a half-hourly meter file, plus three homes planning solar. 143 runs, every plan scored against its true cost for the year ahead.

RIGHT PLAN FROM A METER FILE

Peakless 10 of 10

EnergyPal 4, bonkers.ie 4, kilowatt.ie 2, switcher.ie 1. If Energia's 30% offer is not open to new customers, EnergyPal gets 10 of 10 and Peakless 4.

RIGHT PLAN FROM TYPED USAGE

Peakless 10 of 11

bonkers.ie 3, kilowatt.ie 2, switcher.ie 2. EnergyPal only takes meter files.

PRICE GAP FROM A METER FILE

EnergyPal 0.12%

Peakless 0.35% as tested, 0.18% after today's fix. bonkers.ie 2.5%, kilowatt.ie 1.6%, switcher.ie 42%.

THE SURPRISE

EnergyPal

A small, file-only site that prices plans almost exactly, simulates solar, batteries and EVs, and takes your own plan's rates. It had two Energia standing charges right that Peakless had wrong, and its sums were closer than Peakless's this morning.

What was tested

Each home is a year of half-hour readings built from the national load profiles, with heat pumps, storage heaters, EVs, panels and batteries added where the home has them. Every site got the same home in two ways: the yearly kWh typed in (with export for solar homes where the site asks for it), and the half-hourly file uploaded in ESB Networks' format. EnergyPal only takes files.

The true cost of each plan is its published unit rates applied to every half hour of the year ahead, with announced price changes from their date, the standing charge pro rata, the PSO levy, export paid at the plan's rate, and no cashback. A site is scored on three things: how far its yearly figures are from the true costs across the plans it prices (the price gap), what following its top plan costs against the truly cheapest plan (€ lost), and whether its top plan is the cheapest one (right plan). Only plans a household switching supplier can take are counted as a site's top plan.

Plans were matched by name to the 33 smart-meter plans Peakless carries. Where a site lists a version Peakless doesn't carry (a smaller discount, a free Sunday instead of a free Saturday), that version was priced separately from the same published rates, so no site is marked down for listing a different offer.

The surprise: EnergyPal

energypal.ie is a small site built on a low-code app platform. It only takes a meter file: there is no box for a yearly figure or a bill. Upload the file, choose urban or rural, and it lists 36 plans with the standing charge, import cost, export credit and discount in separate columns. It reads the file exactly (4,192 kWh for our typical home, 1,827 kWh exported for the solar home), says how many days the file covers, and lets you price only the last 12 months.

Its sums are the closest of the four rivals by a wide margin. Across the ten homes, EnergyPal's yearly figure was within 0.5% of the true cost for 260 of 280 plan prices, using its own engine, not ours. That makes it the best independent check we have on Peakless's prices (see "Do the sites agree on prices?").

It goes further than a plan list. A solar and battery simulator takes two roof faces with size and direction, a usable battery size, and whether the battery charges from the grid (it defaults to never). An EV simulator takes mileage, efficiency, charger size and charging window. A custom-plan tab prices a plan you type in, including one you have negotiated. It also shows a 24-hour usage chart with the day, night and peak bands behind it.

Where it falls short: no typed route, so a home without its file can't use it. It lists Energia's and Bord Gáis's plans at their new prices for the whole year ("From 12th Oct"), a small overstatement. Like the other three rivals, it lists Energia's 28% and 23% versions, not the 30% and 27% offers on Energia's own plans page.

Picking the plan from a meter file

Each cell shows the price gap, then € lost by following the site's top plan. Green is the cheapest plan, amber costs under €50 a year more, red €50 or more.

Home	Cheapest plan, true cost	Peakless	bonkers.ie	kilowatt.ie	switcher.ie	EnergyPal
Small flat, 2,000 kWh	Waterpower Smart Tariff (SST) €867	0.6% €0	0.9% €0	1.4% €4	35.4% €4	0.1% €0

Home	Cheapest plan, true cost	Peakless	bonkers.ie	kilowatt.ie	switcher.ie	EnergyPal
Typical home, 4,200 kWh	Energia Smart 24 Hour €1,510	0.3% €0	0.9% €26	1.3% €32	42.0% €32	0.1% €26
Large family, 7,500 kWh	Energia Smart 24 Hour €2,479	0.3% €0	0.9% €29	1.2% €63	45.5% €80	0.1% €29
Two working from home, 5,100 kWh	Energia Smart 24 Hour €1,778	0.4% €0	0.9% €27	1.2% €43	43.6% €76	0.1% €27
Night-heavy (immersion on a night timer), 5,000 kWh	Electric Ireland Home Electric+ SST Saver 16% €1,674	0.3% €0	0.9% €0	1.3% €0	42.0% €0	0.1% €0
Heat pump, 9,000 kWh	Energia Smart 24 Hour €2,816	0.4% €0	1.0% €30	1.2% €37	45.8% €37	0.1% €30
Night storage heaters, 11,000 kWh	Electric Ireland Home Electric+ SST Saver 16% €2,524	0.4% €0	1.1% €0	3.9% €0	41.2% €67	0.3% €0
EV charged 2am-5am, 6,700 kWh	Flogas Smart EV Night Charge 29% €1,915	0.3% €0	7.5% €0	1.4% €70	42.1% €131	0.2% €0
EV charged at teatime, 6,700 kWh	Energia Smart 24 Hour €2,236	0.2% €0	10.1% €172	1.2% €56	45.7% €172	0.1% €28
Rural typical home, 4,200 kWh	Energia Smart 24 Hour €1,584	0.4% €0	0.9% €13	1.2% €18	40.2% €18	0.2% €13

EnergyPal and bonkers.ie miss the cheapest plan for six homes for the same reason: neither lists Energia Smart 24 Hour at 30% off. They pick Flogas Smart 24Hr at 29% instead, €13 to €30 a year dearer. switcher.ie still reads half of every file (on 5 October its own calculation showed 2,096 of the typical home's 4,192 kWh) and spreads it on a standard day, night and peak split, so all its bills are 35–50% too low. bonkers.ie's list for the work-from-home file stopped at 45 of its 49 plans.

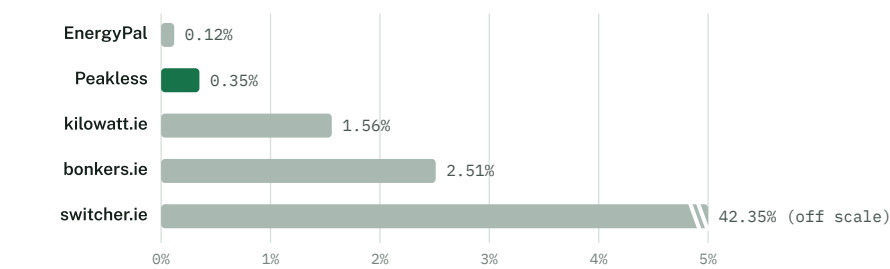

Picking the plan from typed usage

Home	Cheapest plan, true cost	Peakless	bonkers.ie	kilowatt.ie	switcher.ie
Small flat, 2,000 kWh	Waterpower Smart Tariff (SST) €867	0.5% €0	3.4% €4	2.6% €4	3.0% €4
Typical home, 4,200 kWh	Energia Smart 24 Hour €1,510	0.3% €0	3.9% €32	2.8% €32	3.6% €32
Large family, 7,500 kWh	Energia Smart 24 Hour €2,479	0.2% €0	4.2% €80	2.8% €80	3.9% €80
Two working from home, 5,100 kWh	Energia Smart 24 Hour €1,778	1.1% €0	4.7% €76	3.4% €76	4.3% €76
Night-heavy (immersion on a night timer), 5,000 kWh	Electric Ireland Home Electric+ SST Saver 16% €1,674	1.0% €0	0.9% €0	2.3% €0	0.8% €0
Heat pump, 9,000 kWh	Energia Smart 24 Hour €2,816	5.0% €37	3.5% €37	3.1% €37	3.3% €37
Night storage heaters, 11,000 kWh	Electric Ireland Home Electric+ SST Saver 16% €2,524	3.5% €0	12.6% €0	15.2% €0	13.9% €0
EV charged 2am-5am, 6,700 kWh	Flogas Smart EV Night Charge 29% €1,915	0.5% €0	3.6% €0	5.7% €733	6.9% €70
EV charged at teatime, 6,700 kWh	Energia Smart 24 Hour €2,236	2.2% €0	13.7% €301	13.2% €279	5.8% €172
Rural typical home, 4,200 kWh	Energia Smart 24 Hour €1,584	0.3% €0	3.8% €18	2.6% €18	2.7% €18
Typical home, older 24-hour meter	Energia Standard Electricity €1,579	0.0% €0	0.9% €10	2.6% €36	3.1% €46

With only a yearly figure, bonkers.ie and switcher.ie spread use on the standard smart-meter split (about 54% day, 37% night, 9% peak), which suits Electric Ireland's SST plan; kilowatt.ie uses its own profile. Peakless asks how the home heats, whether there is an immersion on a night timer and whether there is an EV, and shapes the year from that. kilowatt.ie's top plan for both EV homes is Electric Ireland's Weekender with free Sundays, which only pays if the car is charged on Sundays. Our EV homes charge every night, and on that plan they would pay €733 and €279 a year more than on the cheapest plan. Peakless's heat pump home is its one miss: €37, with a 4.9% price gap.

Totals for the homes without solar

Site	Typed: right plan	Typed: € lost	File: right plan	File: € lost	Price gap, file	Plans listed
Peakless	10 of 11	€37	10 of 10	€0	0.35%	33
bonkers.ie	3 of 11	€558	4 of 10	€297	2.51%	47
kilowatt.ie	2 of 11	€1,295	2 of 10	€323	1.56%	113
switcher.ie	2 of 11	€535	1 of 10	€617	42.35%	54
EnergyPal	no typed route	—	4 of 10	€153	0.12%	36

Average price gap from a meter file, ten homes. Peakless as tested this morning.

The Energia question

Energia's own plans page offers Smart 24 Hour at 30% off (28.10c a unit), Smart Data at 27% and the 24-hour meter plan at 30%, with a "Select Smart 24 Hour Plan" button. Its tariff page shows Smart Data at 23% and the 24-hour plan at 26%, and all four rival sites list Smart 24 Hour at 28% and Smart Data at 23%. On 5 October switcher.ie listed both; today it lists only the dearer ones. Energia's sign-up page shows rates only after you enter a meter number, so we could not settle which a new customer gets. Peakless prices the 30% and 27% offers, and they decide the answer for six of the ten homes.

Site	Energia's 30% and 27% offers open to new customers		Only the 28% and 23% versions open	
	Right plan, file	€ lost, file	Right plan, file	€ lost, file
Peakless	10 of 10	€0	4 of 10	€149
bonkers.ie	4 of 10	€297	9 of 10	€144
kilowatt.ie	2 of 10	€323	2 of 10	€168
switcher.ie	1 of 10	€617	1 of 10	€463
EnergyPal	4 of 10	€153	10 of 10	€0

If the dearer versions are all that is on offer, Peakless's top plan for those six homes becomes the 28% version, €9 to €42 a year more than Flogas Smart 24Hr, and EnergyPal is right for all ten. This needs a person to check with Energia, or sign-up with a real meter number.

Do the sites agree on prices?

The true costs above use the published rates Peakless holds, so a mistake there would flatter Peakless. This table checks that. It shows each site's typical gap from the true cost for each plan, across the ten meter-file homes (median). Rivals that price the same file independently should land close to zero if the rates are right.

Plan	Peakless	bonkers.ie	kilowatt.ie	switcher.ie	EnergyPal

EnergyPal is within 0.5% on 260 of 280 plan prices, bonkers.ie on 164 of 279, kilowatt.ie on 192 of 290. Where the rivals agree with each other and not with Peakless, Peakless was wrong. That happened for two Energia plans. From 12 October Energia's Smart Day/Night standing charge is €348.57 a year (it is €331.97 now), and EV Smart Drive's rises 28% to €339.22. Peakless had €265.01 rising 5% for both. bonkers.ie and kilowatt.ie had both right, EnergyPal had EV Smart Drive right (it doesn't list Smart Day/Night), and Energia's tariff page confirms them. Peakless's figures for those two plans were about 3% low. Neither plan was anyone's top pick, so no answer changed. Both are corrected today.

Where one rival disagrees with the rest, that rival is out of date or prices a different offer. kilowatt.ie has Waterpower about 16% dearer and Bord Gáis about 2–3% dearer than the

other sites. bonkers.ie has Ecopower and Community Power about 5% cheaper than the other sites and the suppliers' pages as Peakless last read them. kilowatt.ie's Flogas plans are the 10% versions, not the 29% loyalty offer, so they are not compared. switcher.ie is 35–50% low on everything because of the half-read file.

Homes with panels already up: meter file

Home	Cheapest plan, true cost	Peakless	bonkers.ie	kilowatt.ie	switcher.ie	EnergyPal
4 kWp solar, no battery	Electric Ireland Home Electric+ SST Saver 16% €563	0.8% €0	3.6% €0	5.1% €0	50.5% €0	1.8% €0
4 kWp solar + 10 kWh battery	Electric Ireland Home Electric+ SST Saver 16% €491	0.9% €0	2.4% €0	3.8% €0	37.4% €0	1.1% €0
6 kWp + 10 kWh battery + EV charged 2am-5am	Electric Ireland Home Electric+ SST Saver 16% €571	0.9% €0	75.7% €43	3.8% €0	39.7% €35	1.4% €0
6 kWp + 9 kWh battery, put in mid-April (file part before, part after)	Electric Ireland Home Electric+ SST Saver 16% €363	24.8% €101	118.7% €0	120.8% €0	16.6% €0	119.4% €0

For three of the four homes the file is a year with the panels. Peakless, EnergyPal and bonkers.ie price it almost exactly. kilowatt.ie warned that 35–59% of the data was missing on the three battery files, and was 4–5% off. The fourth home put in 6 kWp and a 9 kWh battery in April, so its file is half before and half after. The other sites price that mixed year, and their bills come out more than double the year ahead with panels. Peakless asks when the panels went up and rebuilds the year with them: its gap is 25%, mostly from assuming the battery charges from the grid at night (next section).

Homes with panels already up: typed

bonkers.ie and switcher.ie ask for units bought and sold. kilowatt.ie asks for use before the panels plus the system. Peakless takes either.

Home	Peakless, units bought and sold	bonkers.ie, units bought and sold	switcher.ie, units bought and sold	Peakless, use before panels + system	kilowatt.ie, use before pa
4 kWp solar, no battery	7.0% €0	3.6% €0	5.4% €0	5.2% €0	24.9% €0
4 kWp solar + 10 kWh battery	18.9% €184	2.6% €0	3.6% €0	18.7% €184	37.3% n/a top: Yuno Energy EV Stand
6 kWp + 10 kWh battery + EV charged 2am-5am	18.5% €32	92.5% €43	17.7% €0	17.5% €32	41.1% n/a top: Yuno Energy EV Stand
6 kWp + 9 kWh battery, put in mid-April (file part before, part after)	80.4% €101	110.9% €0	112.6% €0	21.6% €101	65.6% €101

The half-before, half-after home typed as one yearly figure can't be priced well by anyone: the figure describes neither the old year nor the new. kilowatt.ie's top plan for the two battery homes is Yuno's "EV Standard Smart", a plan Peakless doesn't carry, so it isn't scored. kilowatt.ie lists two Bord Gáis plans for existing customers above it.

Batteries: two true costs

A battery changes the answer more than anything else in this comparison, and the sites disagree about how it is run. A battery that only stores spare solar suits a flat-rate plan. One that also fills from the grid on cheap night hours suits an EV plan, and saves a lot more. So the true costs were worked out both ways. For the second, each plan's cheap hours fill the battery to whatever level is cheapest that month: the best a fixed schedule could do on that plan.

For the 4 kWp and 10 kWh home, the cheapest plan is **Electric Ireland Home Electric+ SST Saver 16%** at €491 a year if the battery only stores solar, and **Yuno Energy EV Variable Smart** at €277 if it also fills at night: €214 a year less.

Site and input	Top plan	Site's figure	True cost, battery on solar only	True cost, battery also filled at night	Second answer shown
Peakless, units bought and sold	Yuno Energy EV Variable Smart	€266	€675	€277	If it only takes solar: Electric Ireland Home Electric+ SST Saver 16%, €468 (true €491)
Peakless, use before panels + system	Yuno Energy EV Variable Smart	€269	€675	€277	If it only takes solar: Electric Ireland Home Electric+ SST Saver 16%, €473 (true €491)
Peakless, planning from a file	Yuno Energy EV Variable Smart	€280	€675	€277	If it only takes solar: Electric Ireland Home Electric+ SST Saver 16%, €483 (true €491)
Peakless, meter file	Electric Ireland Home Electric+ SST Saver 16%	€493	€491	€334	None: the night-charging saving is not offered
kilowatt.ie, use before panels + system	Yuno Energy EV Standard Smart	€309	not in our list	—	—
kilowatt.ie, planning from a file	Yuno Energy EV Standard Smart	€307	not in our list	—	—
EnergyPal, planning from a file	Electric Ireland Home Electric+ SST Saver 16%	€423	€491	€334	—
EnergyPal, meter file	Electric Ireland Home Electric+ SST Saver 16%	€491	€491	€334	—
bonkers.ie, meter file	Electric Ireland Home Electric+ SST Saver 16%	€491	€491	€334	—
switcher.ie, units bought and sold	Electric Ireland Home Electric+ SST Saver 16%	€488	€491	€334	—

Peakless and kilowatt.ie assume the battery is filled at night. Peakless says so on the Plans page (“This needs your battery to charge from the grid at night”) and gives the answer for a solar-only battery under it. Both of its answers are right for this home, and its figures are within 1–5% of the true costs. kilowatt.ie has no solar-only setting: its “Smart Control” switch changes how the night filling is scheduled, not whether it happens. EnergyPal defaults to solar only and lets you change it. bonkers.ie and switcher.ie price the readings as they are.

The gap this found in Peakless: when a home with a battery uploads its meter file, Peakless prices the readings exactly (right for the home as it runs) but never mentions the night-filling saving. For this home that is about €214 a year; for the home with a 6 kWp system and an EV it is about €371. The typed route shows it; the file route should too.

Planning solar

Three homes uploaded their meter file from before the panels and added the system they then put in: 4 kWp facing south at 35°, with or without a 10 kWh battery, and 6 kWp with a battery for the EV home. Only Peakless, kilowatt.ie and EnergyPal offer this. The true cost is the year with the panels.

System added to the before-panels file	Cheapest plan once built (battery on solar only)	Peakless	kilowatt.ie	EnergyPal
4 kWp, no battery	Electric Ireland Home Electric+ SST Saver 16% €563	6.3% €0 top: Electric Ireland Home Electric+ SST Saver 16%, says €605, true €563	23.3% €0 top: Electric Ireland Home Electric+ SST Saver 16%, says €689, true €563	4.8% €0 top: Electric Ireland Home Electric+ SST Saver 16%, says €527, true €563
4 kWp + 10 kWh battery	Electric Ireland Home Electric+ SST Saver 16% €491	18.2% €184 top: Yuno Energy EV Variable Smart, says €280, true €675 if filled at night: true €277	33.9% top: Yuno Energy EV Standard Smart €307, not in our list	13.3% €0 top: Electric Ireland Home Electric+ SST Saver 16%, says €423, true €491 if filled at night: true €334
6 kWp + 10 kWh battery, EV at night	Electric Ireland Home Electric+ SST Saver 16% €571	16.9% €32 top: Yuno Energy EV Variable Smart, says €183, true €603 if filled at night: true €200	37.8% top: Yuno Energy EV Standard Smart €230, not in our list	11.4% €0 top: Electric Ireland Home Electric+ SST Saver 16%, says €479, true €571 if filled at night: true €434

Price gaps here are mostly the solar model, not the plan prices. EnergyPal makes 4,018 kWh a year from 4 kWp (our test home makes 3,718) and so comes out low. kilowatt.ie keeps less of the solar in the home within each half hour, on purpose, and comes out high. Peakless lands between them. For batteries, the scored top plan is the solar-only one; see the table above for the night-filled case.

What each site offers

	Peakless	bonkers.ie	kilowatt.ie	switcher.ie	EnergyPal

What changed in Peakless today

- **Two Energia standing charges corrected.** Smart Day/Night: €331.97 now, €348.57 from 12 October. EV Smart Drive: €265.01 now, €339.22 from 12 October. Rural figures from the same page. Peakless’s meter-file gap across the ten homes drops from 0.35% to 0.18%, and the typed gap from 1.33% to 1.19%. No top plan changes.
- **Meter files from a home whose own panels were up all year are priced from the readings.** They were being rebuilt from a solar model, which went wrong for battery homes whose winter exports are near zero (a 63% gap on one test home). Now 0.4%.
- **Panels put in partway through the file.** Peakless asks whether that is when they went up, and rebuilds the year ahead with them.

Still open for Peakless

- **Meter file with a battery: show the night-filling saving.** Worth about €214 to €371 a year to the two test homes. Needs the battery simulated on the rebuilt year, beside the exact price of the readings.
- **Energia’s 30% and 27% offers.** Confirm with Energia that new customers get them. If not, switch to the 28% and 23% versions.
- **Heat pump typed in:** 4.9% gap and €37 lost. Needs real heat-pump meter files to improve.
- **The half-before, half-after battery home:** the rebuild leans on the night-filling assumption and lands 24% low on a solar-only basis.

How it was run

All four rival sites were driven through their public forms on 9 October 2026 in a headless browser, with electricity only, urban unless the home is rural, a smart meter, direct debit, online billing, all plans shown and cashback off. Results were read from the page. Typed runs entered the yearly kWh; for solar homes, bonkers.ie and switcher.ie got units bought and sold, and kilowatt.ie got use before the panels with the system size and battery. File runs uploaded the same ESB-format file to every site. EnergyPal’s solar simulator was given the same size and direction; kilowatt.ie’s was given the size. Peakless was run on this morning’s build, answering its setup questions from each home’s facts. The panel size was set so each system is exactly 4.0 or 6.0 kWp.

Limits. The homes are synthetic: real homes are less regular, and our solar year is one weather year, so the planning figures depend on each site’s solar model as much as on its pricing. The true costs use the rates Peakless holds; the price check above is the guard against that, and it caught two errors. Matching plans by name can be wrong at the margins; plans we could not match with confidence were left out, not guessed.

The study’s scripts, mappings, raw site results and scores are in docs/five-way-2026-10-09/ .
